

Abstract

The Internet environment in the new media can be extended to include the communication, media, administrative, legal, economic, social, psychological and cultural contexts, and all that is a factor that affects and is influenced by communication and media activities that are marketed through the internet.

Research is one of the descriptive analytical research that analyzed the problem of digital communication in the light of digital media. The research found that the laws regulating the work in the Internet environment constitute the law that is agreed by most countries, communities and communication objects over the network. The administrative and technical system of the Internet Is a system of precision, control and control and is controlled by a group of States represented by administrative and technical bodies.

It also proved that the Internet environment is still unsafe, and allows the possibility of overtaking individual privacy, and spread the crimes of theft and fraud, and most of the communicative objects do not disclose their true identity, and the Internet environment is characterized as a communication environment rather than an information environment, and most of its communication activity Entertainment function on other communication functions.
